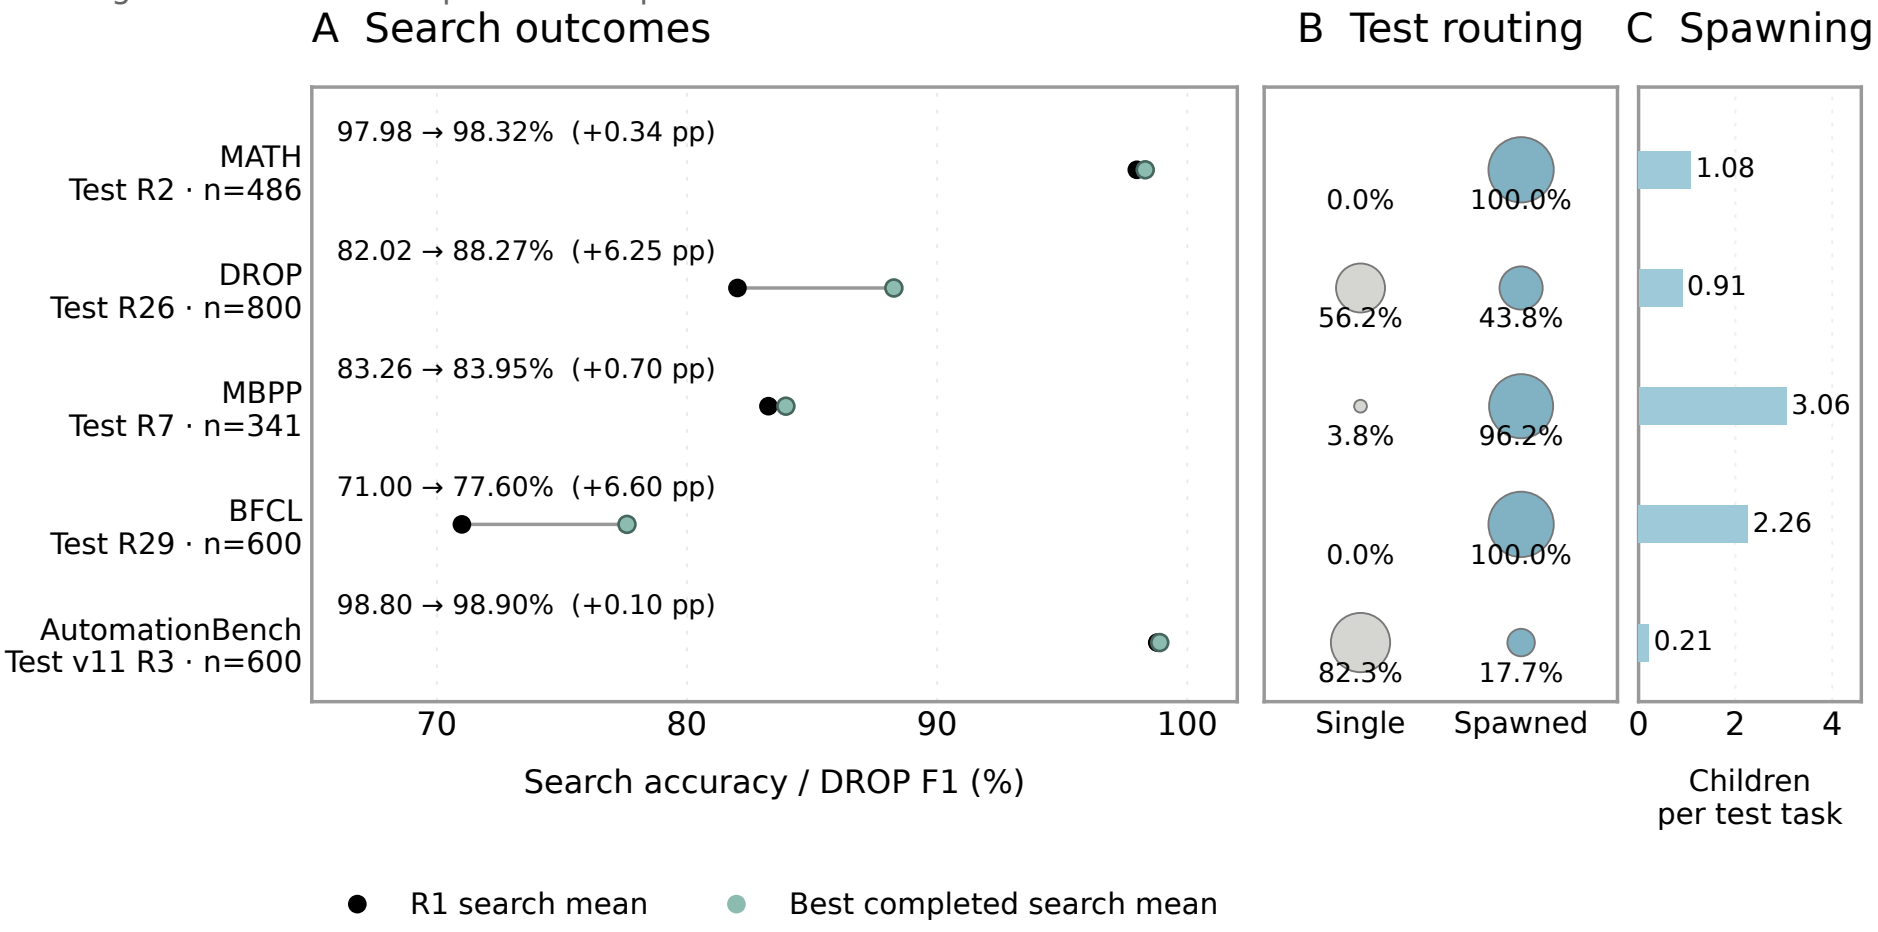
MFlow: search outcomes and adaptive execution

Existing observations · DeepSeek · complete test sets



A: best observed means; repeated candidates can contribute. Five validation passes per completed round.

B: bubble area = fraction of test tasks. C: spawn events / all test tasks, including tasks that stay single.

BFCL search best is R31; the displayed supplementary test is R29. DROP search uses F1.

HLE has no complete search round; Qwen/MATH R2 is incomplete. They are listed in the accompanying data notes.
